The opinions presented here are solely those of the authors and do not necessarily reflect official positions of the National Park Service.

Acknowledgments
The research described in this article was supported by National Park Service Contract No. CX-1600-5-0001, North Atlantic Regional Office, Boston, Mass., P. A. Buckley, Chief Scientist. We thank Dr. Buckley for helpful comments on this manuscript. Additional support came from the Office of Science and Technology, National Park Service, Washington, D.C. Research facilities and other assistance were provided by Cape Cod National Seashore and coordinated by James Killian. Completion of the studies was aided by Stephen P. Leatherman. D. Craig Edwards of the University of Massachusetts at Amherst Zoology Department was advisor for the infauna study, and Fred Greeley of the University of Massachusetts at Amherst Department of Forestry and Wildlife was advisor for the tern research.
